

Moulding Service

Moulding Service is a dynamic and innovative company, founded in 1999 on the brilliant intuition of partners bringing together thirty years of experience in the rotational moulding sector with highly qualified technical skills.

Moulding Service

offers its customers a close collaboration in the design and manufacture of moulded products, assisting them through process stages from project conception to final realization. This process doesn't stop after the first few stages, but continues right through to production, providing support to the customer in solving any issues through a specially appointed contact who supervises the entire production process, its progress and processing phases, intervening when necessary, even when the project is finished.

Moulding Service:

Moulding Service srl Headquarter

via Viazza 1° tronco 27 - loc. Ubersetto - 41042 Fiorano Modenese (MO)

Production and warehouse

via Viazza 1° tronco, 23 - loc. Ubersetto - 41042 Fiorano Modenese (MO)

Italian style rotational moulding

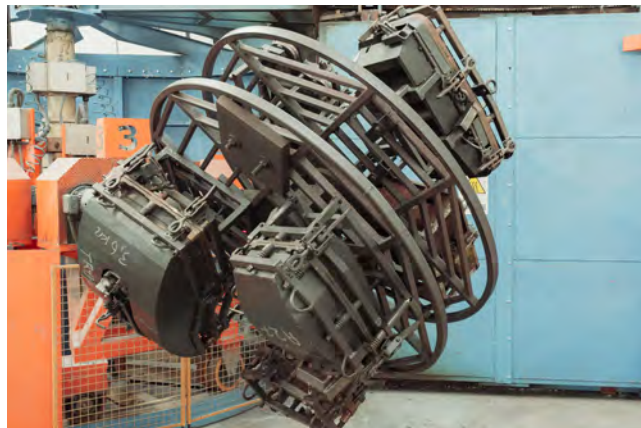

QUALITY AS A PHILOSOPHY

Over the years, Moulding Service has made quality its philosophy. We predominantly work with customers looking for practical solutions, whose primary goal is the quality of the final product. The strength of Moulding Service has always been its customer service. Indeed, beyond simply supplying a moulded product, we provide full pre and after-sales services and assistance. We prepare control masks and templates to guarantee uniform dimensions, and perform systematic checks throughout processing and all the tests requested by the customer and defined in processing specifications.

CARE FOR THE ENVIRONMENT

Moulding Service has always cared for the environment. For this reason, we carry out regular checks on all phases of the production cycle, and the performance of machinery and extraction systems in order to minimize atmospheric emissions, which are constantly monitored. Furthermore, the raw materials we use and the products we make are all recyclable, and thus form a part of a safe and responsible waste disposal cycle.

ROTATIONAL MOULDING

Rotational moulding is a technological process that facilitates the production of hollow bodies in one piece, without the need for joining. Therefore, it uses hollow moulds that form the exterior of the product. The resulting products can be of complex shapes, free from internal stress points, of large dimensions and with an excellent uniformity in terms of thicknesses. It is also possible to obtain various types of surface finish and to co-mould various types of insert. The large range of usable polymers and the versatility of the technology allow its application to the most varied sectors.

SERVICES

- Rotational moulding of polyethylene products
- Product finishing with manual or automated processing
- Product completion with accessory parts
- Moulds creation, maintenance and modifications
- Design or co-design of products and moulds.

MAIN PRODUCTION SECTORS

- Agriculture, gardening
- Furniture and interior design
- Automotive and transport
- Biomedical
- Power production
- Lighting technology
- Nautical
- Industrial cleaning
- Hydraulics and water and fuel tanks
- Sports and leisure
- Industrial items
